

IN THE SPECIFICATION

Please replace the paragraph at page 2, lines 5-12, with the following rewritten paragraph:

B1
In this type of information processing devices, however, operating buttons can not be operated while a screen mounted on the display body is viewed, in the case where the display body is folded against the main body. It would be convenient, even when the display body is folded against the main body, if many kinds of system operations including setting of a hardware system ~~can~~ could be carried out while the screen mounted on the display body is viewed.

Please replace the paragraph at page 2, line 19, to page 3, line 5, with the following rewritten paragraph:

B2
The foregoing object and other objects of the invention have been achieved by the provision of an information processing device in which a display body having a display screen mounted on the front surface thereof is connected to a main body having a keyboard mounted thereon so as to rotate in opening/folding directions and in a turning direction, an operating means is provided at a position so as to be operable even when the back surface of the display body is at least close to the main body, and a system menu showing processing items based on an OS program is displayed according to an operation of the operating means on a display screen.
